Abstract: According to researchers Grazyna Fosar and Franz Bludorf, DNA is influenced by words and frequencies. According to their research, the key lies with the other 90% of the non-coding for protein DNA, often misrepresented as “junk DNA”, that serves as data storage and communication. The research of Russian biophysicist and molecular biologist Dr. Pjotr Garajajev suggests that living chromosomes function just like solitonic/holographic computers using endogenous DNA laser radiation. In simpler terms, words and sentences of our human language can recode our DNA. However, here are vital questions that are not addressed in ALL of the Russian research: 1) What is the actual language of the introns or potential DNA, 2) How does language turn on or off the DNA, and 3) How does this apply to consciousness and healing the bio-energetic body? This research paper will answer the above questions and propose a more sophisticated and advanced perspective on how language affects the introns.

Index Terms: consciousness, DNA, morphogenetic field, quantum physics, scalar energy

Introduction

The physical atomic form of the current homo sapien-2 species is easily influenced and vulnerable to sound frequencies since our original cosmic form is built upon infrasound. Therefore, specific sound frequencies can assist the human body for self-healing or nefariously cause disease and even death. Specific words, sounds and images unequivocally can alter our consciousness either raising or lowering it. Sound is more powerful than light as language is utilized as an energetic carrier for certain frequency tones that activate elements that affect the chemicals in our body, which in turn affects the DNA. One must be able to sense the energetic encryption behind sound and language if one is to be able to know the difference between harmful or beneficial intentions and frequencies.

Cosmic Anatomy

The physical atomic form of the current homo sapien-2 species is built upon the spirit form, the dark matter form and the light form structures. The term “form” refers to a very specific part of the individual transharmonic, multidimensional anatomy as each form is highly intricate and varies in organization, energetic constitution, responsibility and function. The eternal spirit form, the eternal dark matter form, the finite light form (the outer electromagnetic form that consists of the “soul”), and the finite physical form (physical-matter “atomic”) are four very distinctive components of the personal, transharmonic anatomy. Each form is highly individual in nature, however operate collectively as one. The spirit form generates the dark matter form, the dark matter form generates the light form, and the light form generates the physical, matter atomic form.

1. The Spirit Form is eternal and composed of eternal, pure, consciousness radiation, which is the eternal, conscious, vibrating-infrasound-radiation gelezic E-TH-ER substance.
2. The Dark Matter Form is eternal and composed of eternal spirit-light-matter substance
3. The Light Form is finite and composed of electromagnetic vapor-radiation substance.
4. The Physical Form is finite and composed of frozen light (physical matter) that consists of the internal

cells, organs, organ system, bones, muscles, skin, etc.

The eternal dark matter form functions as the dark matter connection between the eternal spirit form and the finite light and physical forms. The finite light and physical forms regain the eternity potential via the process of quantum transfiguration in which the physical and light forms assimilate with the spirit form via the dark matter form. [1]

The Language of Introns

Atomic, cellular communication between introns occurs when one cell transmits information and imprints those instructions onto the receiving intron via the magnetic vector of a scalar wave. According to Professor Dr. Konstantin Meyl, the DNA generates a scalar wave that propagates in the direction of the magnetic field vector. Hydrogen bonds hold together through Coulomb forces electrically polarized base pairs in a DNA strand. To gain access to this polarization, the hydrogen bonds must be separated, requiring radial outward electric field lines or, a vortex field. Since the magnetic field vector is perpendicular to the electric vertical field, a resulting axial direction to the DNA strand is a logical consequence. The motion of the vortex field in the direction of the magnetic field results in a longitudinal wave forming a magnetic scalar wave. [2]

Figure 1. Electric ring vortices form a magnetic wave.

Meyl confirms, “The coding regions in the DNA strand, the genes, make up only a fraction of the total amount of DNA. The stretches that flank the coding regions are called introns and consist of non-coding DNA. Introns were looked upon as junk in the early days”. [3] As I stated earlier, biologists and geneticists currently believe that this non-coding DNA may be essential in order to

expose the coding regions and to regulate how the genes are expressed. In the presence of scalar waves, DNA cells tend to resonate with each other as they attract information and energy from other cells and their environment. This model may explain how epigenetics occurs. If both transmitter and receiver cell are in bioresonance, then both information and energy are in homeostasis. However, if the transmitter cell does not find a receiver cell to resonate with, DNA code encryption would be impossible. To prevent this from occurring, there must be neutral cells that are not encrypted and do not have to transmit information. These include the introns or potential DNA, as the introns are the un-coded DNA fragments that outnumber the 'exons', which actually carry the information. It is due to the introns that a scalar wave can potentially be formed in between two identical segments of two cells. This suggests balanced energy conditions on both ends but if the original information were dissimilar, the gene coding would be drawn to the receiver from the sender cell causing bioresonance restriction. This clearly proves that introns are behind evolution. Gene-controlled metabolism is solely possible only when information plus energy are presented. This accurately describes the characteristics of a scalar wave for unlike electromagnetic waves that only transport energy, scalar waves carry both information and energy. A DNA wave moving through the twisted double helix must contain sufficient energy to not only progress through the helix, facilitating transport over a certain distance, but will also ensure the desired production of proteins at the site of the recipient.

Scalar Energy-Frequency

What modern science defines and describes as a "scalar wave" is not only flawed and incorrect but the question is how can someone give, share or teach information if they have never truly experienced the scalar frequency (waves-energy-power) through consciousness? It is only through direct cognition or experiential knowing that one can give, teach or share anything! Modern scientists, physicists, mathematicians, etc. have become part of the disinformation movement since they have never experienced the true nature of the scalar frequency (waves-energy-power) and it was erroneously taught to them in the disinformation university educational system. A scalar wave is a transharmonic (multidimensional), spherical standing energy array that radiates out of a static point of sound-light vibration within the morphogenetic field of the greater cosmic Unified Field of consciousness (energy). While scalar waves appear to move from point to point, they are spherical, fixed points of sound-light that are sequentially threaded together within the cosmic fabric of the morphogenetic field. The appearance of the scalar wave movement is created through the sequential flashing-on (light) and flashing-off (sound) of scalar wave points that emanate the effect of a flashing linear series of light bulbs. A prime example is imagine viewing an electronic billboard in Times Square, New York City. Although it appears as if the contents of the electronic billboard are moving, in reality it is the row of a synchronized series of flashing light bulbs that appears as if the light moves from one point in the row to another. Scalar waves embody static points of perpetual fission and fusion that radiate from the fabric of morphogenetic fields. [4]

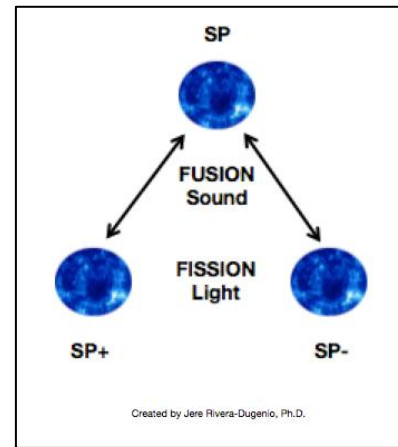

Figure 1. The Perpetual Fission-Fusion Scalar Wave

The Scalar Interferometer Brain

The human brain is a scalar energy generator that repetitively creates patterns of scalar waves via the activity of thought. According to Nikola Tesla, with two cerebral brain halves (left and right hemispheres) the human being has a scalar energy interferometer between the ears. Since the brain and nervous system processes high frequency discharges, the human brain can create and detect scalar waves. Thus a human being can often generate anomalous spatiotemporal effects at a distance and through time. This offers an exact mechanism for higher senses such as direct cognition, cellular telepathy, manifestation, materialization, molecular transmutation, electrical projection, magnetic accretion, transmigration and bi-location. Consequently, properly guided thought diametrically affects the function of the personal scalar morphogenetic field manifestation blueprint. Every single thought absolutely affects the observable state of the body-mind-spirit system and the materialization of events with the external hologram.

Figure 2. The Human Brain-Scalar Interferometer

Furthermore, it offers a logical reason why an individual can interface with specific scalar-plasma-crystalline sound technology (RASHA Technologies) and materialize healing and expansion of consciousness. Our thoughts co-create our own personal reality hologram due to the fact that thoughts are scalar wave configurations of transharmonic patterns of bi-polar, electromagnetic energy radiation, which create specific patterns of scalar frequency within the personal morphogenetic field manifestation blueprint. Wandering and directionless thought produces chaotic information arrays within the personal morphogenetic field manifestation blueprint thus

resulting in ineffective manifestation abilities. Conversely, thought guided by clear intention produces organized information within the personal morphogenetic field manifestation blueprint resulting in efficient manifestation and materialization potentiality. Human beings that can combine experiential knowledge of the cosmic anatomy structure with thought guided by clear intention reclaim one of the most potent form of scalar power. Thoughts will eventually materialize into reality, whether it is in this space-time vector or in the other alternate realities.

The Primal Substance

A morphogenetic field or manifestation pattern is comprised of the primal substance, units of consciousness energy called the “Source Particle”, which exist as omni-polar points of static vibration. Source Particle units are the minutest units of consciousness energy or the assembling sections of matter that create the patterns upon which consciousness in all manifest and un-manifest forms enters materialization. Source Particle units are omni-polar (holding the potentiality for all polarities or none) units of vibrating energy that continuously rotate backward and forward between a state of bi-polar light radiation (scalar standing wave) and omni-polar sound vibration.[5] To reinforce, scalar waves are points of spherical, standing waves composed of magnitudes of conscious energy that radiate out of static units of vibration (the Source Particle units), which form the morphogenetic field patterns upon which consciousness enters dimensionality in order to experience the manifest reality hologram. Scalar lattices are formed through Source Particle phasing, which is the activity of internal fission (expansion) and fusion (contraction) distinctive of Source Particle units. Source Particle units continuously split and duplicate by means of fission, then re-materialize through fusion, generating a blinking on and off of scalar wave points or blink-line sequences that regulate the essential positioning of consciousness within the scalar lattices comprising morphogenetic fields.

Figure 4. The Original Source Particle

The moment Source Particle units exist in their omni-polar state, they reside as ante-matter element, the original state of energy structure before pre-matter materialization. Via an internal fusion mechanism distinctive to their pattern, Source Particle units divide to

generate bi-polar waves albeit duplicating their original omni-polar form. In the bi-polar phase, Source Particle units divide into Source Particle Negative (SP-) units and Source Particle Positive (SP+) units that are interwoven units of bi-polar light energy emission generating electromagnetic, scalar standing waves. SP- units create the energetic assembling segments for particle patterns, while SP+ units create the energetic assembling segments for concurrently manifesting anti-particle patterns. Particle and anti-particle patterns are interwoven, integrated by the ante-matter Source Particle units from where they manifest. SP- particle units signify the contraction phase of ante-matter energy, including lower oscillation, higher vibration, and hold base magnetic polarity. SP+ anti-particle units signify the expansion phase of ante-matter energy, including higher oscillation, lower vibration and hold base electrical polarity. [6]

BioRegeneration and Scalar Energy

The patterns of scalar energy frequency that thought transmits into the personal morphogenetic manifestation template, will directly influence the situations and relationships that will be experienced in the personal manifest hologram. To cultivate skill in the manifestation and materialization process, the conscious planning mind must become familiar with the “language of scalar energy” for this is the language of sound and light upon which the personal morphogenetic field manifestation blueprint functions. [7] The language of scalar waves is expressed through the structures of specific wave continuums that appear to the three dimensional conscious mind as sound frequencies, light continuums (or color) and symbol structures. BioRegeneration technologies are utilized to consciously direct energy within the personal morphogenetic field manifestation template of the physical body to stimulate into activity dormant portions of the introns. Specific techniques of BioRegeneration instantly generate imperceptible, organic acceleration within the interconnected energy structures of the DNA blueprint, chakra arrangement, merkaba fields, Kundalini energies, higher dimensional consciousness and the cosmic anatomy. The result of this quickening is expansion of consciousness. BioRegeneration technologies signify scalar mechanic functions, which use the natural, intrinsic power of the scalar wave to produce intended modification within the morphogenetic field manifestation blueprint of the body. The primary scalar wave technologies that is utilized within BioRegeneration technologies are light (color), symbols (eternality and base-12 geomancies) and sound. A geomancy is a specific array of inner light (electrical) and sound (magnetic) utilized in mental projection of energy within the personal morphogenetic field manifestation blueprint. This array of sound-light represents a specific scalar wave blueprint constructed upon specific electro-tonal units of sound frequency that are infused with transharmonic electrical flux. Through this it is possible to directly influence our introns, which is the morphogenetic blueprint of light and sound waves that our chemical DNA develops upon. Thus, the language of Source is the language of the scalar frequency and DNA!

The Power of Sound and DNA

Words deliver electro-magnetic instructions to the introns (potential DNA) via the morphogenetic fields surrounding every atom, cell, organ, organ system, in the physical atomic body. Words are sound drivers that convert into manifestation lattices and sound vibrations that affect the personal morphogenetic field body. Specific word arrangements can function to either assist one to advance and be more conscious or devolve and digress. Quantum Morphological Repatterning (QMR) are powerful word instructions such as "I AM" sound encoders that program powerful electromagnetic instructions into your own personal morphogenetic field body. Examples of positive "I AM" sound programs:

- I AM PEACE.
- I AM LOVE.
- I AM HEALED.
- I AM SOURCE.

The optimum times for quantum morphological repatterning is just prior to sleep and immediately upon waking. Prior to sleep, repeat out loud the specific "I AM" sound encoders and as you being to fall asleep, repeatedly mentally recite it until you reach the sleep state. Upon awakening, repeatedly mentally recite the "I AM" sound encoders until you fully awaken. Language is a type of harmonic resonance consisting of symbols (alphabet) and sound frequencies. Language also directly influences the personal morphogenetic field manifestation blueprint, as well as the consciousness level that materialize within the physical atomic form. Therefore, our language can either stimulate or turn off the introns. The truth is our language is a distorted language that keeps us imprisoned via feeding the mutations in our DNA. This mutation was the process of disconnecting DNA, which included:

- De-activating DNA strands 9 through 12,
- Dis-assembling DNA strands 1 through 8 and inserting a "skip code" (resulting in an inorganic, un-natural sequencing of SP+ and SP- strands in the DNA's double helix),
- De-activating all but 4 sub-frequency spheres in all 12 DNA strands eliminating the organic form of "variable base" DNA
- Scrambling of the natural pairing configuration between the nucleotide sequences within the double helix,
- Left the remnants in the cells, which science calls the introns or potential DNA.

The infrastructures of the homo sapien-2 DNA are infinitesimal substructures of crystallized (materialized) frequency, which are electro-tonal sound patterns and electromagnetic light continuums that assemble into crystalline form via the magnetic scalar wave. These infinitesimal, transharmonic crystalline templates are referred to as DNA Source Codes. The DNA Source Code is the blueprint for one strand of DNA and is comprised of twelve (12) magnetic particle units called "base codes" and twelve (12) electrical anti-particle units called "acceleration codes". All aspects of the homo sapien-2 DNA is built upon this morphogenetic blueprint of twelve (12) base codes and twelve (12) acceleration codes comprising twenty-four (24) Source Codes equals one (1)

DNA strand. The pre-ancient Hebrew tribes knew about the scalar wave patterns that when generated within the DNA, allowed the physical body to metamorphose into light as it allowed particle and anti-particle to merge, changing into fire and raise up to the next octave. They understood there was a system that possessed the key to advanced spiritual development and connecting with God and that secret was found in what is known as "Fire Letters or Codes". [8]

Figure 5. DNA Fire Letters

The Hebrew alphabet correspond to the initial layer of the "Fire Letters", which are light and symbol codes. The Hebrew alphabet letters signify sound-tone combinations that are precise static points of tonal frequency with the dimensional spheres. Therefore, one can utilize sequential fire letter codes to immediately influence consciousness (energy) and matter. Each DNA strand is composed of twelve (12) fire letters that equals one (1) fire sequence and each DNA template consisting of 12 strands equals 144 fire letters. [9]

Each DNA strand is comprised of the frequency patterns and light continuums of one dimensional sphere. Each DNA represents a "Fire Letter Encryption Code (Scalar Wave Program) sequence corresponding to one (1) dimensional sphere of consciousness (energy). A fire letter is a static point of combined scalar frequency composed of 12 smaller units of frequency called "Vector Encryption Codes". The homo sapien-2 biology has an atomic, cellular alphabet of 144 primary fire letters and each of the 12 sets of 12 fire letter codes form 1 composite electro-tonal program expressed as the geomancy control code. [10] Color (light), symbols and sound are the language that the human mind utilizes to direct specific applications of frequency into exact mathematical and geometrical relationships through which the function of Earth's terrestrial spheres, global merkaba fields and temple interstellar gateway complex grid systems, vortices, portals and interstellar gateways can be consciously influenced, operated and directed. The human mind is the administrator of frequency while the human body is the instrument through which directed frequency flows. [11]

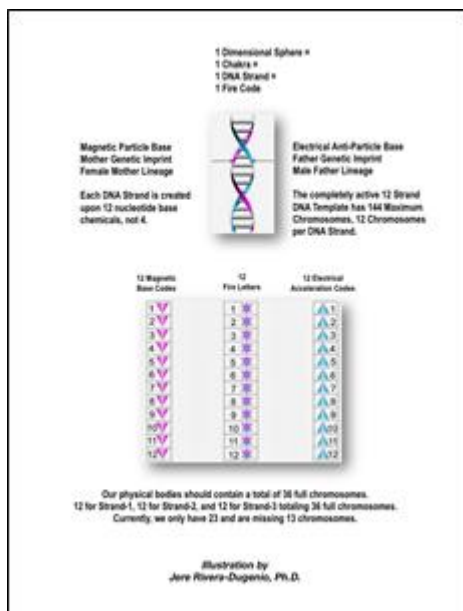

Figure 6. DNA Fire Encryption Codes

The RASHA Scalar-Plasma-Crystalline Technology

The RASHA Scalar-Plasma-Crystalline Sound Harmoniser is the first, public-sector, scalar, plasma relaxation technology with the most advanced resonant frequency generating software, the RASHA Base-12 frequencies that relaxes and harmonizes the autonomic nervous system (ANS) via scalar, morphogenetic intron communication. This is morphogenetic, scalar plasma frequency reprogramming, which is not based on the limited perspective or laws of Newtonian physics but rather it adheres to a much larger volume of quantum morphogenetic field physics that impacts the introns on a quantum level, allowing for the repatterning of the morphogenetic fields surrounding every cell, organ and system of the body.

Figure 3. The RASHA Scalar-Plasma Technology

CONCLUSION

All languages embody fragments of the sound vibration scalar templates that constitute the morphogenetic field, scalar grid of the body's morphogenetic field, manifestation blueprint. Written language's symbols are scalar standing wave instructions that translate into sound vibration electrical impulses within the body's scalar morphogenetic field template. The electrical impulses arising from the oral and written language forms effect the

functions of the introns or potential DNA, physical body and the perceptual facilities of embodied consciousness. Language patterns translate into mathematical codes within the contours of consciousness and the body's blueprint serving as operational instructions to the body-mind-spirit system.
